Bulgarian 60×60 — Module Rebuild Instructions

Handover file for continuing improvements on any Claude installation

---

What this project is

A free Bulgarian language course at **https://whatchan.co.uk/bulgarian/**
60 standalone HTML files (`day01.html` → `day60.html`), plus `index.html`, `exam-b1.html`, `media.html`.
No framework, no build system — plain HTML/CSS/JS files, uploaded via FTP.

Owner: Adrian Dane
Server path: `/app811033055/bulgarian/`
Buy Me a Coffee: https://buymeacoffee.com/adriandane
LinkedIn: https://www.linkedin.com/in/adrian-dane-9227b5347/
GA4: `G-FKB7EWJX2T` (already on all pages — do not remove)

How to use this file

1. Upload the day HTML file you want to improve as an attachment
2. Paste this entire document into the chat
3. Say: *"Please rebuild this module following the instructions file"*
4. Claude will produce an improved HTML file you can download and FTP to the server

---

Design system — never change these

Colour palette (CSS variables in `:root`)

```
css
```

```
--navy: #1a1f4e          /* hero backgrounds, nav, section headers */
--navy-mid: #252b68      /* mobile nav background */
--cream: #fdf8f0         /* page background */
--cream-dark: #f5ede0    /* card backgrounds */
--gold: #e8a020          /* headings em, accents, audio buttons */
--gold-light: #fdf0d0    /* gold info boxes */
--rose: #8b1a2e          /* B1 badges, wrong answers */
--rose-light: #fdf0f2    /* rose backgrounds */
--green: #1a6b3c         /* A1 badges, correct answers */
--green-light: #e8f5ee   /* green backgrounds */
--blue: #1a56a8          /* A2 badges, links */
--blue-light: #e8f0fb    /* blue info boxes */
--ink: #1c1c2e           /* body text */
--muted: #5c627a         /* secondary text */
--border: #e2ddd5        /* dividers, card borders */
```

Typography

- **Body:** `Source Sans 3` (excellent Cyrillic support) — always with `!important` to override any injected styles
- **Headings:** `Playfair Display` — always with `!important`
- Both loaded from Google Fonts with `subset=cyrillic`

CEFR level badges

- A1 = green (`#1a6b3c`)
- A2 = blue (`#1a56a8`)
- B1 = rose (`#8b1a2e`)

File structure — every day file must have these sections in order

```
1. <head>       — GA4 tag, fonts, meta, schema.org JSON-LD, <style> block
2. <nav>        — sticky navy bar with all 60 day links + mobile select
3. <header>     — .day-hero hero section (navy gradient)
4. <main>       — all learning content sections
5. <footer>     — site footer with copyright, BMC link, LinkedIn link
```

Hero section required elements

```html
```

```
<div class="day-hero">
  <div class="hero-inner">
    <p class="hero-breadcrumb"><a href="index.html">Home</a> › [Phase] › Day XX</p>
    <div class="hero-kicker">
      <span class="level-badge badge-[a1|a2|b1]">[A1|A2|B1]</span>
      <span class="day-num-label">DAY XX</span>
    </div>
    <h1>[Day title]<br><em>[Subtitle in gold]</em></h1>
    <p class="day-hero-sub">[2-sentence description of what learner will achieve]</p
    <div class="hero-chips">
      <span class="chip">⏱ 60 min</span>
      <span class="chip">📖 [N] vocabulary words</span>
      <span class="chip">🎧 Audio included</span>
      <span class="chip">✏️ Quiz included</span>
    </div>
  </div>
</div>
```

CRITICAL: All text in `.day-hero` must be white/gold. The body `color` is `--ink` (`#1c1c2e`) which inherits into the hero unless explicitly overridden. Always set:

```
.day-hero-sub { color: rgba(255,255,255,0.95); }
.hero-breadcrumb, .hero-breadcrumb a { color: rgba(255,255,255,0.9); }
.day-num-label { color: rgba(255,255,255,0.9); }
.chip { color: rgba(255,255,255,0.97); }
```

If the HTML uses different class names (e.g. `hero-desc` instead of `day-hero-sub`), target those specific classes using `.day-hero .hero-desc { color: ... }`.

Audio system

Primary: MP3 files

```
Server path: /app811033055/bulgarian/audio/dayXX/filename.mp3
URL: https://whatchan.co.uk/bulgarian/audio/dayXX/filename.mp3
```

Filename generation rule — CRITICAL

Every audio button has `data-text` (Cyrillic) and `data-phonetic` (romanised).
The JS `makeFilename()` function generates the MP3 filename from `data-text`:

```javascript
```

```
function makeFilename(text) {
  return text.replace(/[^\w\s]/g, '').replace(/\s+/g, '_').toLowerCase().substring(0
}
```

The Python script that generates the audio files uses the **identical** logic:

```python
safe_filename = re.sub(r'[^\w\s]', '', original_text)
safe_filename = re.sub(r'\s+', '_', safe_filename).lower()[:30]
```

These two must stay in sync. Never change one without changing the other.

Audio button HTML pattern

```html
<button class="play-audio"
        data-text="Добър ден"
        data-phonetic="Dobur den"
        onclick="playAudio(this)">
  ▶ Добър ден
</button>
```

Fallback: TTS (browser Web Speech API)

If MP3 fails to load, the system falls back to Bulgarian TTS voice, then romanised phonetic TTS. The full audio JS block must be present in every file — copy from a working day file.

Audio improvement targets

When rebuilding a module, **add audio to every item** that currently lacks it:

- Every vocabulary word (both Cyrillic and romanised form)
- Every grammar example sentence
- Every dialogue line
- Reading passage sentences (break long passages into individual sentence buttons)
- Key phrases in the writing task instructions

Curriculum map — all 60 days

A1 — Foundations (Days 1–15)

Day	Topic
1	The Cyrillic Alphabet
2	Greetings & Farewells
3	Numbers 0–20
4	Introductions & Personal Info
5	The Verb "To Be" — съм
6	Gender & the Definite Article
7	This & That — Demonstratives
8	Numbers 20–1000 & Prices
9	Days, Months & Telling Time
10	Adjectives & Agreement
11	Family Members & Relationships
12	Present Tense — Regular Verbs
13	Negation — не, нямам
14	Places in the City
15	A1 Checkpoint & Review

A2 — Intermediate (Days 16–35)

Day	Topic
16	Food, Vegetables & Bulgarian Dishes
17	At the Restaurant
18	Shopping & Clothing
19	Transport & Directions
20	The Home & Furniture

Day	Topic
21	Daily Routines & Reflexive Verbs
22	The Aorist Past Tense
23	The Imperfect Past Tense
24	Health & the Body
25	Feelings & Emotions
26	Weather & Seasons
27	Hobbies & Free Time
28	Work & Professions
29	Bulgarian Traditions & Holidays
30	A2 Checkpoint & Review
31	Comparative & Superlative Adjectives
32	Future Tense with ще
33	Modal Verbs — мога, трябва, искам
34	Telephone & Digital Communication
35	Travel & Booking

B1 — Advanced (Days 36–60)

Day	Topic
36	The Да Construction
37	Relative Clauses — който
38	Passive Voice
39	Reflexive Pronouns — себе си
40	Aspect: Perfective vs Imperfective
41	Conditional Sentences — ако
42	Indirect Speech
43	Formal Register & Business Bulgarian

Day	Topic
44	Medical Bulgarian
45	Legal & Immigration Vocabulary
46	Bulgarian History & Geography
47	Bulgarian Culture & Customs
48	Academic Bulgarian — Reading & Writing
49	Advanced Listening — BNT & Media
50	Idiomatic Bulgarian
51	B1 Grammar Review — Verbs
52	B1 Grammar Review — Nouns & Articles
53	B1 Vocabulary Review — Themed Sets
54	Reading & Comprehension Practice
55	Writing Practice — Formal Letters
56	Oral Practice — Role Plays
57	Bulgarian in Real Life — Scenarios
58	Citizenship Exam Preparation
59	Final Review & Consolidation
60	B1 Final Mock Exam & Graduation

Content standards — what makes a good module

Vocabulary section

- **Minimum 12 words**, ideally 16–20 for A2/B1 days
- Every word needs: Bulgarian (Cyrillic) | Romanised | English | audio button
- Group words thematically into sub-sections if there are many
- Include a **"real use" example sentence** for at least 6 of the words
- Example sentence format: Bulgarian → romanised → English, each line with its own audio button

Grammar section

- **One main grammar point** explained clearly, no jargon
- Rule stated in plain English first, then shown in a table
- **Minimum 4 example sentences**, each with audio
- A clear "pattern box" showing the formula (e.g. Subject + ще + verb infinitive)
- Common mistakes box — what learners typically get wrong

Reading passage

- **150–250 words** for A2, **250–400 words** for B1
- Set in a **real-world Bulgarian scenario** (at a market, on a tram, in a government office, ordering food, etc.)
- Bulgarian text first, romanised below, English translation below that
- Each paragraph should have an audio button
- 3–4 comprehension questions after the passage

Dialogue section

- **6–10 exchange turns** (realistic, not stilted)
- Set in a scenario a learner would actually encounter
- Each line has an audio button
- Vocabulary callouts for any new words introduced in the dialogue
- A "your turn" prompt asking the learner to practise responding

Writing task

- A clear, achievable prompt (write 5 sentences, fill in the form, reply to this message)
- Vocabulary hints provided
- A model answer given at the bottom (collapsed/hidden) so learners can self-check

Quiz

- **20 questions** minimum
- **70% pass mark** (14/20 for A1/A2, same for B1)
- Mix of question types: multiple choice, fill-the-blank (shown as options), reading comprehension, cultural knowledge
- Every question has an explanation shown after answering — not just "correct/incorrect"
- Last 2–3 questions should test the day's grammar point specifically

---

Practical examples — the most important improvement target

Every grammar rule must have at least one example from **each** of these real-world contexts:

Context	Example use case
Ordering food	At a mehana, café, fast food
Shopping	Market, supermarket, clothing shop
Transport	Bus, tram, taxi, asking directions
Government / admin	Municipality office, bank, post office
Social	Meeting neighbours, small talk, phone calls
Health	Pharmacy, doctor, describing symptoms
Home	Landlord, utilities, maintenance

For **B1 days** also include:

- A sentence a Bulgarian might say in that context (authentic register)
- The formal equivalent if different from informal
- One idiom or fixed expression related to the topic

Section header pattern

Every major section uses this pattern:

```html
<div class="section-header" data-emoji="📖">
  <p class="sh-label">Section N</p>
  <h2>Section title</h2>
  <p>One sentence describing what this section covers.</p>
</div>
```

The `data-emoji` attribute shows a large faint emoji as a background decoration. Choose an appropriate one for each section type:

- Vocabulary: 📖
- Grammar: ✏️
- Reading: 📰

- Dialogue: 💬
- Writing: 🚀
- Quiz: 🎯
- Recap: ⭐

Info boxes

Use these to add cultural notes, learning tips, and warnings:

```html
<div class="info-box blue">
  <p class="info-box-title">💡 Learning tip title</p>
  <p>Content here.</p>
</div>
```

Colour variants: `blue`, `gold`, `green`, `rose`
Use `gold` for cultural notes, `blue` for grammar tips, `green` for encouragement, `rose` for common mistakes.

Navigation — exact structure required

The nav must contain **all 60 days** grouped into 3 optgroups for mobile, and show the first ~15 days in the desktop nav (others accessed by scrolling). The current day link must have `class="nav-link current"`.

Desktop nav structure:

```html
```

```
<nav class="site-nav">
  <div class="nav-inner">
    <a href="index.html" class="nav-brand">BG Bulgarian <span>60×60</span></a>
    <div class="nav-links">
      <!-- A1 days: day01-day15 with pip-a1 -->
      <!-- separator: <span class="nav-link" style="color:rgba(255,255,255,0.25);...
      <!-- A2 days: day16-day35 with pip-a2 -->
      <!-- B1 days: day36-day60 with pip-b1 -->
    </div>
    <div class="nav-right">
      <a href="https://www.linkedin.com/in/adrian-dane-9227b5347/" class="nav-li-btn
        🔗 Adrian Dane
      </a>
    </div>
  </div>
</nav>
```

Mobile select must cover all 60 days in 3 `<optgroup>` elements.

Pager (bottom navigation)

Every day file ends with a pager linking to the previous and next day:

```html
<div class="pager">
  <a href="dayXX.html" class="btn-prev">← Day XX: [Title]</a>
  <a href="dayXX.html" class="btn-next">Day XX: [Title] →</a>
</div>
```

Day 1 has no previous. Day 60 links back to `index.html` and `exam-b1.html`.

Coffee bar

Include this above the pager on every day:

```html
```

```
<div class="coffee-bar">
  <div class="coffee-bar-text">
    <strong>☕ Enjoying the course?</strong> It is completely free.
    If it is helping you, a coffee keeps the server running.
  </div>
  <a href="https://buymeacoffee.com/adriandane" class="coffee-bar-btn" target="_blan
    ☕ Buy me a coffee
  </a>
</div>
```

Currency note

Bulgaria adopted the euro on **1 January 2026**.

- All prices in lessons must use **€** and **eurocents** (стотинки)
- Exchange rate for historical reference: 1.95583 BGN = €1
- Never use лев/лева in any new content

Known bugs to watch for

1. **Quiz div nesting** — every `.q-block` must be explicitly closed with `</div>`. Unclosed divs break all subsequent quiz questions.
2. **Quiz options alignment** — `.q-opt` needs `align-items: flex-start`. Option text must be wrapped in `<span class="q-opt-text">` with `flex: 1`.
3. **JS compatibility** — avoid: lookbehind regex, template literals inside `<script>` blocks, unescaped apostrophes in JS strings, `for...of` with await. Use `var` not `const/let` for maximum browser compatibility.
4. **Hero text contrast** — all text inside `.day-hero` inherits the body `color` (`#1c1c2e` = near black) unless explicitly set to white. Always check class names in the HTML match the CSS selectors — different day files sometimes use different class names (`hero-desc` vs `day-hero-sub`, `breadcrumb` vs `hero-breadcrumb`). Fix by adding scoped rules like `.day-hero .actual-class-name { color: rgba(255,255,255,0.95); }`.
5. **Mobile tables** — always wrap tables in `<div style="overflow-x:auto;-webkit-overflow-scrolling:touch;">`.
6. **Cyrillic word-break** — any element containing Cyrillic text needs `overflow-wrap: break-word; word-break: break-word`.

7. **makeFilename JS** — must use `.substring(0, 30)` not `.substr()` or `.slice()`, and must strip non-word chars with `/[^\w\s]/g` first.

Rebuild checklist — run through this before delivering

- [ ] Hero text is fully readable (white/gold on navy — not dark/invisible)
- [ ] Hero chips show correctly (not merged into one line)
- [ ] All vocabulary words have audio buttons
- [ ] All grammar examples have audio buttons
- [ ] All dialogue lines have audio buttons
- [ ] Practical real-world examples present for each grammar rule
- [ ] Quiz has 20 questions with explanations
- [ ] Quiz options use `align-items: flex-start` + `q-opt-text` span
- [ ] All quiz `.q-block` divs are closed
- [ ] Mobile: tables wrapped in overflow div
- [ ] Mobile: Cyrillic text has word-break styles
- [ ] makeFilename function uses correct pattern (substring 30, strip non-word)
- [ ] Pager links to correct previous/next day
- [ ] Coffee bar present above pager
- [ ] GA4 tag present in `<head>`
- [ ] No lev/лева currency — euro only
- [ ] Current day nav link has `class="nav-link current"`
- [ ] Schema.org JSON-LD present with correct day title and CEFR level

---

Audio file generation (Adrian's local task)

After receiving the rebuilt HTML, run `generate_pro_audio.py` to create MP3 files.
The script uses Google Cloud TTS (`bg-BG-Standard-A` voice).
Credentials file: `gen-lang-client-0451405897-25b8e7e0a115.json`

SSML pacing: 65% speed for main phrase, 1800ms break, 75% for example.

The script reads `data-text` attributes from the HTML and generates filenames using:

```python
safe_filename = re.sub(r'[^\w\s]', '', original_text)
safe_filename = re.sub(r'\s+', '_', safe_filename).lower()[:30]
```

Upload audio files to: `/app811033055/bulgarian/audio/dayXX/`

FTP workflow

1. Download rebuilt HTML from Claude outputs
2. Generate audio with `generate_pro_audio.py`
3. FTP HTML file to `/app811033055/bulgarian/dayXX.html`
4. FTP audio folder to `/app811033055/bulgarian/audio/dayXX/`
5. Verify at `https://whatchan.co.uk/bulgarian/dayXX.html`

Last updated: March 2026. Days 1–16 fully rebuilt. Days 17–59 pending rebuild.
